

BioAsia 2023

Advancing For One

24th - 26th Feb, Hyderabad

20
Years

HOSTED BY:

Over the past couple of decades, Telangana's Hyderabad has established itself as not only the healthcare and life sciences hub for India but has also emerged as a major healthcare hub for the world. The city further burnished its credentials during the COVID-19 pandemic by playing a key role in helping immunize the world through supply of vaccines.

As the world continues adjusting to the post-pandemic economy, Hyderabad is set to host BioAsia, Asia's largest life sciences and healthcare forum, on February 24-26, 2023.

The pandemic has brought into sharp focus the critical need for the industry, academia, governments, regulators and other stakeholders in the ecosystem to intensify their collaboration for ensuring healthcare innovation at scale, and delivery with equitable access.

With this context, the 20th edition of the marquee healthcare and life sciences event, organized by the Government of Telangana, will feature prominent government dignitaries, industry leaders, researchers, entrepreneurs and other delegates, and explore the theme of Advancing for ONE: Shaping the next generation of humanized healthcare.

- **One Health: Integrating cross-sectoral ecosystems to safeguard the future**
- **Next generation health: Harnessing disruptive technologies such as data, analytics, extended reality, AI and blockchain to deliver personalized healthcare**
- **Equity: Driving accessibility and affordability to provide quality healthcare for all**
